General Projector Information

- Often, the last thing on your mind when getting a new laptop is “How am I going to connect this to projector for use in class?” Never fear, the information here should eliminate some of the confusion and make sure your device gets projected.
- All currently installed projectors accept at least one common connection which is referred to as “VGA”. Typically a VGA cable has blue ends, and the two ends look like the pictures below. If you have this connector on your device already, you are good to go. If not, your device will require a converter from whatever you have to VGA.

- If your device does not have this VGA connection, we will first have to determine which connection it does have
  - HDMI

![HDMI Converter](image)

- Mini DisplayPort
• Micro or Mini HDMI to VGA
